Difference in Three USDT Chain: ERC20, BSC(BEP20) and TRC20

The differences between the three different chain types are described in detail in the table below.

	ERC20	BSC(BEP20)	TRC20
Address Style	Starts with '0'and 'x' Example: 0xbd7e....	Starts with '0'and 'x' Example: 0xbd7e.... its similar to erc20 addresses so please check with exchange/wallet support prior to transfer if you are unsure	Beginning with a capital T Example: T9zP14....
Network	Ethereum (ETH) Network	Binance Smart Chain (BSC) Network	Tron Network
Transfer Speed	Ranging from a few minutes to tens of minutes.	Ranging from a few minutes to tens of minutes.	Fast (Ranging from a few seconds to a few minutes)
Check for Confirmation	www.etherscan.io	www.bscscan.com	http://tronscan.org

Note: Since the USDT in the three networks are not interoperable, users should carefully check if the address is correct when depositing and withdrawing. In order to avoid unnecessary losses due to wrong address, **special attention should be paid to the different address styles of the three types of chains**. Each type of chain has its own advantages and disadvantages, users can choose according to their own assets. If you choose a wrong address, please contact SG_BTCSWAP_ADMIN on telegram immediately. Sending your USDT coins to an incompatible address may result in the loss of your withdrawal. SG_BTCSWAP is not responsible for loss of funds caused by this error.
